**SUBDIVISION & LAND DEVELOPMENTS:**

- A. Duffy Highlands PRD No. 2017-04-07, Phase I Final, Expires 06/13/2022: Mr. Robert Brennan presented. He requests final approval of the Duffy Highlands Phase I. Mr. Scott Shoup's comments per review letter dated December 14, 2017 are as follows (*Mr. Mark Lesnick's comments are italicized*):
  - 1. On the consolidation and recording plans, the seal boxes inadvertently refer to Cranberry Township. (*Seal Boxes have been to reflect the correct municipality*)
  - 2. Private storm I drainage sewer easements should be provided for storm pipes at the rear of Lots 126 through 130. (*Easement added to plans.*)
  - 3. What is to become of Parcel E, the right of way for Short Street? (*Parcels E1 and E2 (Short Street) will be deeded to the property owners to the North and South of the existing Short Street.*)
  - 4. The following additions should be made to drawing sheet Rec.I :
    - a. The eastern property line distance on Parcel E.
    - b. The distances on the northeastern property lines of Parcels B and D.
    - c. The 190.00 feet property line distance on the west side of Parcel B.

*(These Dimensions have been added to the plan.)*
  - 5. The following additions should be made to drawing sheet Rec. 2:
    - a. Bearing and distance on the southern property line of Parcel CC.
    - b. Arc and radius near the northwest corner of Parcel CC.
    - c. Arc and radius near the southwest corner of Lot 115.
    - d. Arc lengths on the frontages of Parcel C-1, Lot 124 and Lot 125.
    - e. Bearings and distances along the rear property lines of Lots 129 and 130.

*(These Dimensions have been added to the plan.)*
  - 6. The slope of the sanitary sewer between manholes 218 and 219 is missing on drawing sheet P.2. (*Missing information added to sheet.*)
  - 7. It is suggested that notes be added to one of the recording plans reflecting that parcels (list appropriate parcel numbers), private storm I drainage sewer easements, stormwater detention ponds and medians I islands within roadways are to be maintained by the Homeowner's Association. (*Note added to Sheet REC.1.*)

Butler Area Sewer Authority comments per review letter dated December 5, 2017 are as follows:

**General**

1. Provide separate subdivision plans for both the Butler Township portion and the Center Township portion of the development. The subdivision plans must contain metes and bounds descriptions for all sanitary sewer easements located within private properties outside of the public street right-of-ways. The easements must be tied to property corners where the easements enter and exit the properties.
2. Provide the type of ownership proposed for both the single family units and the duplex units, ie, fee simple, condominium, rental, etc. Provide a listing for each lot indicating the type of ownership proposed for each lot. This may be a separate sheet and does not have to be included on the drawings, but will be attached to the Developer's Agreement when it is prepared.
3. For any sewer segment (manhole to manhole) where the depth of the sewer, as measured from the pipe invert to the finished surface grade or top of manhole, exceeds 18 feet anywhere within the sewer segment, 1) the sanitary sewer easement must be 30 foot in width for the entire length of the sewer segment, and 2) the pipe must be C900 PVC for the entire length. Add a note to this effect on the plans.
4. Indicate on the Plan those sanitary sewers (main sewer and laterals) that are to be constructed in their entirety as part of the Phase 1 Development.

**Title Sheet**

1. The original Title Sheet indicated that the Plan was for "Final Phase 1 – PRD Plan. The current revised Title Sheet indicates that the Plan is now for the Tentative PRD Plan. Please provide the correct Plan name.

**Construction Plan SP.1/SP.4**

1. The sanitary sewer from MH 229 to MH 230 is approximately 13.5 deep for its entire length. A roof leader sewer (8" or 10" HDPE pipe) is shown as being parallel to and approximately 2' centerline to centerline from the sanitary sewer, at a depth between 4 to 6 feet. This roof leader sewer is, in essence, in the same trench over the sanitary sewer which is unacceptable to the Authority. Relocate the roof leader sewer or the sanitary sewer to create an acceptable horizontal separation.
2. All main line sanitary sewers and proposed laterals crossing a road, berm to berm, must be backfilled with 100% crushed limestone to the bottom of the finished road surface. For any sanitary sewer to be constructed in Phase 1, sanitary main or lateral, add a general note to each drawing (SP.1 – SP.6) where this occurs, in addition to current Note 8, to clarify this BASA requirement.

**Construction Plan SP.2/SP.5**

1. Similar to Item 1 above, a 10" roof leader sewer is shown directly above, and in the same trench, as the sanitary sewer for about 40' from MH 228 to MH 228-1. The same roof leader has a lengthy longitudinal crossing of the sanitary sewer near MH 228-1. Both roof leader locations are unacceptable to the Authority.
2. The sanitary sewer from MH 213 to MH 213A is still over 18 feet deep for a distance of approximately 45 feet from MH 213. As noted in Item 3 in the General requirements above, the easement for this segment must be 30 feet in width for the entire length. It is recommended to take create an additional five foot sanitary sewer easement off of Lot 126 and Lot 421. Revise the plan accordingly.
3. The sanitary sewer from MH 213 to MH 213A must be constructed with C900 PVC pipe. Show this in the profile.

**Construction Plan SP.3/SP.6**

1. Provide a detail of EX MH 101, showing how all pipes (existing and proposed) will enter and exit the manhole, and how the apron and flow channel will be reconfigured to accept the new piping.

**Sanitary Sewer Profile P.1**

1. For all profiles, identify the Phases in which the sanitary sewers are to be installed;
2. For the sewer segment between MH 204 and MH 205, where concrete anchors are indicated, the sewer piping must be C-900 PVC, not SDR 35. Note this in the profile.

**Sanitary Sewer Profile P.2**

1. For all profiles, identify the Phases in which the sanitary sewers are to be installed.
2. The first 40 to 45 feet of sanitary sewer from MH 213 to MH 213A is shown as being 18 feet or deeper as measured from top of finished grade to invert of the pipe. As noted previously, for any sewer segment (manhole to manhole) where the depth of the sewer exceeds 18 feet, the sanitary pipe must be C900 PVC for the entire segment. Therefore, C900 must be used for the sewer segments from MH 213 to MH 213A. Show this in the profile.

**Sanitary Sewer Profile P.3**

1. For all profiles, identify the Phases in which the sanitary sewers are to be installed

**Construction Details D.2**

Please make the necessary corrections or additions to the drawings in the Plan as indicated. Ensure that revision notes and dates are added to each revised drawing.

The Board of Supervisors have forty-five (45) days from Wednesday, December 20, 2017 to grant final approval.
